<b>Day1</b>						60
<b>Day2</b>						-

**Report of event/ activity**

Google Summer of Code is a global program focused on bringing more student developers into open source software development. Students work with an open source organization on a 10 week programming project during their break from school.

KJSCE Codecell, every year conducts sessions for educating the community about the program, encouraging developers to apply and simultaneously solving any doubts about the same. This year, we have conducted a panel session, having our ex-codecell members (Akshay Padte and Vedant Shroff), who were a part of the GSOC 2020, as our panelists. The youtube live stream panel session had more than 350 views and more than 50 participants joining the meet post discussion for their doubts.

The session started with having our panelists and host (Divesh Thakker, codecell member) to have a general discussion on the topic. This was aimed towards getting to know the journey of GSOC of the panelists, and also certain ideas which the panelists wanted to share with aspiring GSOC applicants with their experience. This was achieved through the medium of question and answer.

After the discussion about the program and how to get selected into GSOC, the session was open for people to join in and ask their doubts, on the Google Meet.

Post the doubt session, the session concluded by thanking the ex-codecell panelists and the audience for making the session a successful one.
